Mount: Takahashi EM200 Temma2M
Guiding: Orion SSAG Magnificent Mini AutoGuider
Camera: Canon Rebel XS (1000D) Full Spectrum
Modified @ 800 ISO
Exposure: 3.4 hours, 5 minute subs.

ESPRIT™ APO TRIPLETS THE ELITE ASTROGRAPH FOR THE REST OF US

Designed with the discerning astrophotographer in mind, Sky-Watcher USA's top-of-the-line Esprit refractors deliver the kind of imaging performance one would expect from telescopes costing thousands of dollars more.

With their three-element air spaced objective lens design, false color is completely eliminated, yielding exceptional contrast and sharpness. The included 2-element field corrector guarantees a flat field across the entire imaging plane. The Sky-Watcher proprietary rack-and-pinion focusing system provides a smooth, rock-solid focuser with zero image shift.

Starting at only \$ 1,649, the Esprits come in 80, 100, 120 and 150mm apertures and come with a 9 x 50 right angle finderscope, 2-inch Star diagonal, 2-element field flattener, camera adapter, mounting rings, dovetail plate and foam-lined hard case.

As this 100%-sized image from the extreme upper right corner shows, Esprit maintains crisp, pinpoint stars across the entire image plane.

Sky-Watcher® USA
Be amazed.
